

This tool is part of the Chain-Sys appLOAD suite of productivity tools for Oracle EBS environments. The other tools in this suite are appLOAD, appMIGRATE and appINTERFACE. With the complete suite of products, you get full fledged capabilities for Data extraction, migration, conversion and interface of data for Oracle E-Business Suite 11i/R12 environments with no additional programming needed.

appEXTRACT extracts data from legacy and other external systems. This tool aims to reduce the cost of data extraction activities. Using appEXTRACT tool IT departments build quick data extraction templates. The data output of the appEXTRACT template is in Excel, Comma delimited, XML, HTML and PDF formats. This tool is ideal for extracting data from your Oracle E-Business suite 11i /R12 for reporting and interfacing with other systems. Prebuilt templates are available for this purpose, greatly reducing/eliminating programming needs. appEXTRACT is a 100% web based product.

Benefits

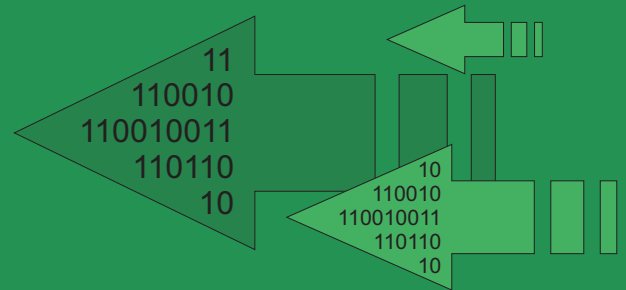

Prebuilt templates and web services for Oracle EBS.

Robust SQL Based data extraction engine.

Substantially reduces time and effort in data extraction.

Migrate Oracle E-Business suite 10.5, 10.7, 11.0.3, 11i master and transactional data into the latest releases of Oracle EBS R12.

Inbuilt integration engine for appLOAD, appMIGRATE and appINTERFACE tools. Integrated workflow.

Features

Preprocessing Engine

appEXTRACT provides a strong PL/SQL preprocessing engine. You can write custom PL/SQL package to preprocess the data for data extraction. The processing can dynamically use the action performed by the preprocessing engine.

Database Independence

appEXTRACT is capable of processing data from any database. Supported databases include Oracle, DB2, SQL Server and MySQL.

Data Output

appEXTRACT can output the data in various formats such as XLS, CSV, TXT, XML, HTML and PDF. The formatted data output from appEXTRACT can be used for data loading and reporting purposes.

appLOAD and appINTERFACE Integration Engine

Integration with appLOAD and appINTERFACE is available. This enables you to extract data from other systems and load into Oracle E-Business suite without additional programming.

Jasper reporting engine

appEXTRACT can be used as a reporting tool as well. It is integrated with Jasper reporting engine to create clean formatted reports in the PDF, XLS and HTML formats.

Security

appEXTRACT templates are secured for modification and execution by users accounts.

Scheduling Engine

appEXTRACT has automated scheduling of extraction routines. The scheduler can process one time request or periodic scheduled requests for extracts. The scheduler can also be setup to load the data extracted using appEXTRACT automatically into Oracle E-Business Suite, using appLOAD.

SOA Services

appEXTRACT provides prebuilt data outbound Web Services. These along with data inbound Web Services provided by appLOAD provides for easy Interfacing between EBS and external systems.
