

appLOAD is a new generation data conversion tool for Oracle E-Business Suite R12/11i. This tool aims to reduce the cost of Oracle EBS data conversion activities. Any Business user can confidently use this tool and convert the data without any technical assistance. With appLOAD, there is no additional programming needed for all your data conversion needs. appLOAD supports all the open interfaces and API's available within Oracle E-Business Suite R12/R11i. appLOAD is part of the Business Process Automation suite of products from Chain-Sys Corporation who are the proud makers of e-chain SCM/ERP Suite.

Benefits

Simple configurations. No additional programming needed.

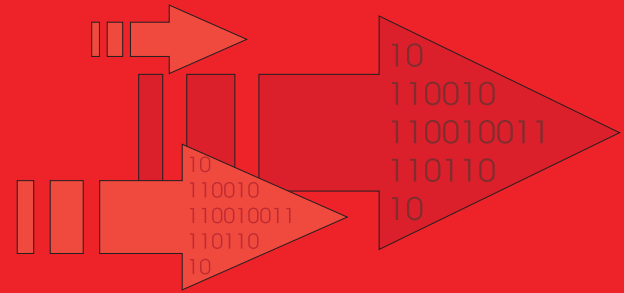

Easy and Intuitive to use.

Data load Tool for Business Users. Technical Consultants not needed.

Data load is available as "Software as a Service"

Reduce Oracle implementation time frame.

Save cost and time on data loading.

Features

Application programmable interfaces (API)

All API's of Oracle E-Business Suite R12/11i are available through appLOAD.

Data Validation

appLOAD provides powerful validation checks. System shows clear warnings and errors reflecting the actual data load process.

Software as a service

Data load capabilities of appLOAD are available as service. appLOAD can be accessed over the internet with high security. This feature will be very useful for a client who wishes to use electronic data loading for few masters and for transactional data.

Data Translation

appLOAD provides features such as: Change case, to-Date, to-Char, Decode Statements, SQL Pre-Validations and Results based on SQL Query or Constant. Complex data translation needs are handled

Data Corrections

appLOAD writes the errors back to Excel input file. Separate info provided for Processed Data, Un-processed data and erroneous data after the data load process is completed.

Open Interfaces

All open interfaces within Oracle E-Business Suite R12/11i are available through appLOAD.

Excel Input

appLOAD accepts data input in excel format. Sample data templates are provided with the software. Data templates are flexible to accommodate changes.

Data Mapping

appLOAD offers easy data mapping between the excel input and the open interface table columns and API input and output parameters. It is a simple drag and drop model. Extra column mapping is allowed over and above the standard templates.

User Friendliness

appLOAD is designed for business users. Easy and intuitive to use HTML user interface. Online help documentation and instructional movies.

Scalability

appLOAD has been benchmarked at 1 million+ records in a single load.
